Python for Data Analysis

AI Tutor-Enabled Self-Paced Professional Course Book

© NoteStore Academy. This course book is licensed for the purchaser’s personal learning use. Do not share, resell or republish without written permission. This is a free preview containing the opening chapters. The full course book contains all ten modules, projects, the capstone and the assessment guide.

Contents

1. How to use this course book
2. Your AI Tutor: five learning modes
3. Module 1: Python Foundations
4. Module 2: Working with Data Structures
5. Module 3: NumPy Essentials
6. Module 4: pandas DataFrames
7. Module 5: Cleaning Data
8. Module 6: Transforming and Combining
9. Module 7: Data Visualisation
10. Module 8: Exploratory Data Analysis
11. Module 9: Introduction to Statistics and Modelling in Python
12. Module 10: Automating and Sharing Analysis
13. Projects and capstone
14. Portfolio, assessment and certificate pathway
15. Completion checklist

How to use this course book

Python for Data Analysis is a self-paced course book that teaches Python fundamentals, then applies them with NumPy, pandas, Matplotlib and seaborn to clean, analyse and visualise data. Every module ends with hands-on exercises using realistic datasets.

A simple study routine

- Study one module at a time. Read the overview and objectives first.
- Work through each key concept, using the TEACH ME prompt whenever an idea is unclear.
- Attempt every practice problem yourself before asking for help.
- Use CHECK MY WORK to review your solutions and CHALLENGE ME to test yourself.
- Finish each module by writing a five-line summary in your own words.

Suggested pace

Most learners complete this course in about 40 hours. Studying four to five hours a week, that is roughly 9 to 11 weeks. Go faster through topics you already know and slower where you need more practice.

Your AI Tutor: five learning modes

This course book is designed to be used with an AI assistant such as ChatGPT, Microsoft Copilot or Gemini. The goal is not to get answers from AI, but to use it as a patient tutor that explains, guides, checks and challenges you. Copy a prompt, replace the text in brackets and keep the conversation going.

TEACH ME

Explain [topic from this module] to me step by step at a [beginner / intermediate / advanced] level. Use a simple example first, then a harder one. Stop and ask me a question to check I understood before moving on.

GUIDE ME

I am working on this problem: [paste problem]. Do not give me the answer. Give me one hint at a time and wait for my next step.

CHECK MY WORK

Here is my solution: [paste working]. Check each step, tell me exactly where any mistake is and why, but let me correct it myself.

CHALLENGE ME

Give me three exam-style questions on [topic from this module], getting harder each time. Wait for my answers, then mark them and explain what I missed.

HELP ME APPLY IT

Show me how [topic from this module] is used in a real situation such as work, research or everyday decisions, then give me a small task to try it myself.

Verify before you trust

AI tools can make mistakes, especially with calculations. Use this five-step check every time:

- ASK: write a clear, specific prompt that includes your level and what you have tried.
- SOLVE: work the problem yourself first, even if you are unsure.
- TEST: substitute values, estimate or graph to see if the answer is reasonable.
- CHECK: compare with the worked examples in this book and your class notes.
- VALIDATE: if the AI and the book disagree, trust the book and your teacher, and ask the AI to explain the difference.

MODULE 1

Python Foundations

Write your first programs.

Learning objectives

- Explain variables and data types in your own words and recognise when it applies.
- Explain conditionals and loops in your own words and recognise when it applies.
- Solve problems involving functions accurately.

Key concepts

Variables and data types

Write a one-sentence definition in your own words, then work one example by hand. Use the prompt below if any step is unclear.

> TEACH ME: Explain variables and data types in Python for Data Analysis step by step at my level. Start with a simple example, then a harder one, and ask me a question to check my understanding.

Conditionals and loops

Find where this appears in your class notes or textbook. Note the key formula or rule, one worked example and one mistake students often make.

> TEACH ME: Explain conditionals and loops in Python for Data Analysis step by step at my level. Start with a simple example, then a harder one, and ask me a question to check my understanding.

Functions

Explain this idea out loud as if teaching a friend. Where you hesitate, ask your AI Tutor for a simpler explanation and a second example.

> TEACH ME: Explain functions in Python for Data Analysis step by step at my level. Start with a simple example, then a harder one, and ask me a question to check my understanding.

Practice problems

1. Write a function that returns the average of a list
2. Count vowels in a string

After attempting each problem, paste your working into the CHECK MY WORK prompt. Then use CHALLENGE ME to get three more problems on the same topic.

Before moving on: write a five-line summary of this module in your own words, then ask your AI Tutor to point out anything you missed.

Continue in the full course book

The full course book continues with:

- Module 2: Working with Data Structures
- Module 3: NumPy Essentials
- Module 4: pandas DataFrames
- Module 5: Cleaning Data
- Module 6: Transforming and Combining
- Module 7: Data Visualisation
- Module 8: Exploratory Data Analysis
- Module 9: Introduction to Statistics and Modelling in Python
- Module 10: Automating and Sharing Analysis
- Four practical projects and a capstone
- Portfolio guide, assessment rubric and completion checklist
